

Formula Name OXYCODONE HCL SUSP 10MG/ML SUSP

Initials AP **Quantity** 1000 **MLS** **Schedule** 2 **Days to Exp** 90 **Date of Formula** 8/9/2023
Cost \$6.42 **Cost Per Unit** \$0.01 **AWP** \$0.00 **AWP Per Unit** \$0.00 **Last Review** 1/6/2016

Chemical Ingredients

Chemical Name	Form	Qty	Units	QS	Est Cost	Ha	Note
OXYCODONE HCL USP	PWD	10.0000	GMS	☐	\$0.00		SOLUBILITY: 1:10 WATER(FS). 1:60 ALCOHOL(SP)
SODIUM METABISULFITE NF GRANULAR	PWD	1.0000	GMS	☐	\$0.00		
FLAVOR MARSHMALLOW ARTIFICIAL	SOLN	5.0000	MLS	☐	\$1.83		NONE
FLAVOR RASPBERRY ARTIFICIAL	SOLN	20.0000	MLS	☐	\$4.58		SOLUBILITY: N/A
CITRIC ACID 10% W/V AQUEOUS SOLUTION	SOLN	0.0000	MLS	☒	\$0.00		
ANHYDROUS SUSPENDING AGENT (UNISPEND)	SUSP	0.0000	MLS	☒	\$0.00		SOLUBILITY:N/A SWEET ORAL VEHICLE

Therapy**Description**

Light pink opaque suspension with fine suspended particles

Classification(s)**Disease State(s)****Instructions****A. Calculations/Special Considerations:**

Oxycodone Hydrochloride USP may have a water determination up to 7%, a limit of alcohol up to 1% and an assay of 97 – 103% calculated on the anhydrous and solvent-free basis. It is important that you obtain a Certificate of Analysis for your specific lot number to verify the percentage of water determination, limit of alcohol and assay (anhydrous and solvent-free basis).

****The amount of Oxycodone Hydrochloride in the final calculation is generally 3-7% above the emperic calculation.**

Refer to specific CoA for utilized lot of Oxycodone Hydrochloride USP

1. Add water determination % _____ % to limit of alcohol % _____ % = water and alcohol in this lot _____ %
2. Subtract answer from step 1 from 100%. 100% - _____ % = amount of pure Oxycodone HCl _____ %
3. Divide 10mg/mL by answer from step 2. 10mg/ml / _____ % = Required conc. of Oxycodone HCl _____ mg/mL
4. Divide the required conc. of Oxycodone HCl _____ mg/mL (answer from step 3) by the assay purity percentage listed on the CoA. _____ mg/mL / _____ % = The required concentration of Oxycodone needed for this compound Lot _____ mg/mL
5. Multiply required concentration of Oxycodone needed for this compound Lot (answer from step 4) by the total volume.
Required conc. of Oxycodone needed for this compound Lot _____ mg/mL x total volume of compound _____ mL =
Amount of Oxycodone HCl powder needed to weigh _____ g

B. Equipment Required:

Weigh boats; beakers; graduated cylinders, scales; stir plate; stir bar; funnel; tape, calculator, mortar & pestle, pH test strips, homogenizer

C. Method of Preparation:

1. Calculate required amounts and fill out compounding log, determine Oxycodone HCl powder weight from above calculation
2. Measure out ingredients
3. In a mortar, triturate Oxycodone HCl into a fine powder using the pestle
4. Add Sodium Metabisulfite to mortar and triturate until fine homogenous powder is formed
5. Slowly wet powder with suspending agent until smooth paste is formed
6. Add 10% of final volume of suspending agent to mortar and transfer to beaker
7. Rinse the mortar & pestle with suspending agent (10% of final volume) to ensure Oxycodone HCl is transferred to beaker
8. Repeat step 7 to ensure all Oxycodone HCl is transferred to beaker
9. Add Marshmallow and Raspberry flavors to mixture in beaker
10. Add suspending agent so the volume of the mixture reaches 90% of total volume
11. Homogenize mixture
12. Check pH of mixture with a test strip. pH should be between 3.5-4.
13. If necessary add citric acid 10% aq. solution dropwise to obtain a pH between 3.5-4. Final pH value _____

Appropriate References Should Be
Consulted. Safety And Efficacy Of
These Formulas Are The
Responsibility Of The Compounding
Pharmacist

14. QS to final volume with suspending agent in class A graduated cylinder, prepare labels, and final enclosure
15. Have compound certified pharmacist perform final verification
16. Pour into amber bottle
17. Label with RX label and "Shake well" "Refrigerate" auxilliary label

D. Labeling:

Label with lot number and expiration barcode and ingredient(s) label.

Store in refrigerator auxillary sticker

Shake Well auxillary sticker

Add prepack label if compound lot made to stock for multiple Rx's

Add Rx auxillary label if compound lot made to order for a unique Rx

_____ (place label here) _____

E. Description of Finished Product:

Light pink opaque suspension with fine suspended particles

F. Quality Control Procedures:

Physical appearance of compound verified by compounding certified pharmacist

Volume of final product is within 5% of intended batch size

Pharmacist signature: _____

G. Packaging Container:

Bulk store in UV protective amber bottle

Dispense in UV protective amber bottle with volume graduations

H. Storage Requirements:

Store refrigerated (36° - 46 °F)

Maximum BUD - 90 days

I. Formula Source & BUD Testing:

Formulation - PCCA 11264

BUD - USP 795
